WE ARE THE GLOVE EXPERTS!

The Glove Company's powerful mission

To provide protection, safety, utility and comfort to people who work with their hands in potentially damaging and dangerous working environments.

The Glove Company's vision that drives the business

To build an innovative growing and successful business through the development of unique purpose-built gloves that meet the specific industry needs of people who work with their hands.

Recognised as the leading industry innovator who develops and manufactures the best "fit for purpose" range of gloves in the market.

All of our creative processes are developed and engineered in house, with the safety of our customers at the forefront of our minds.

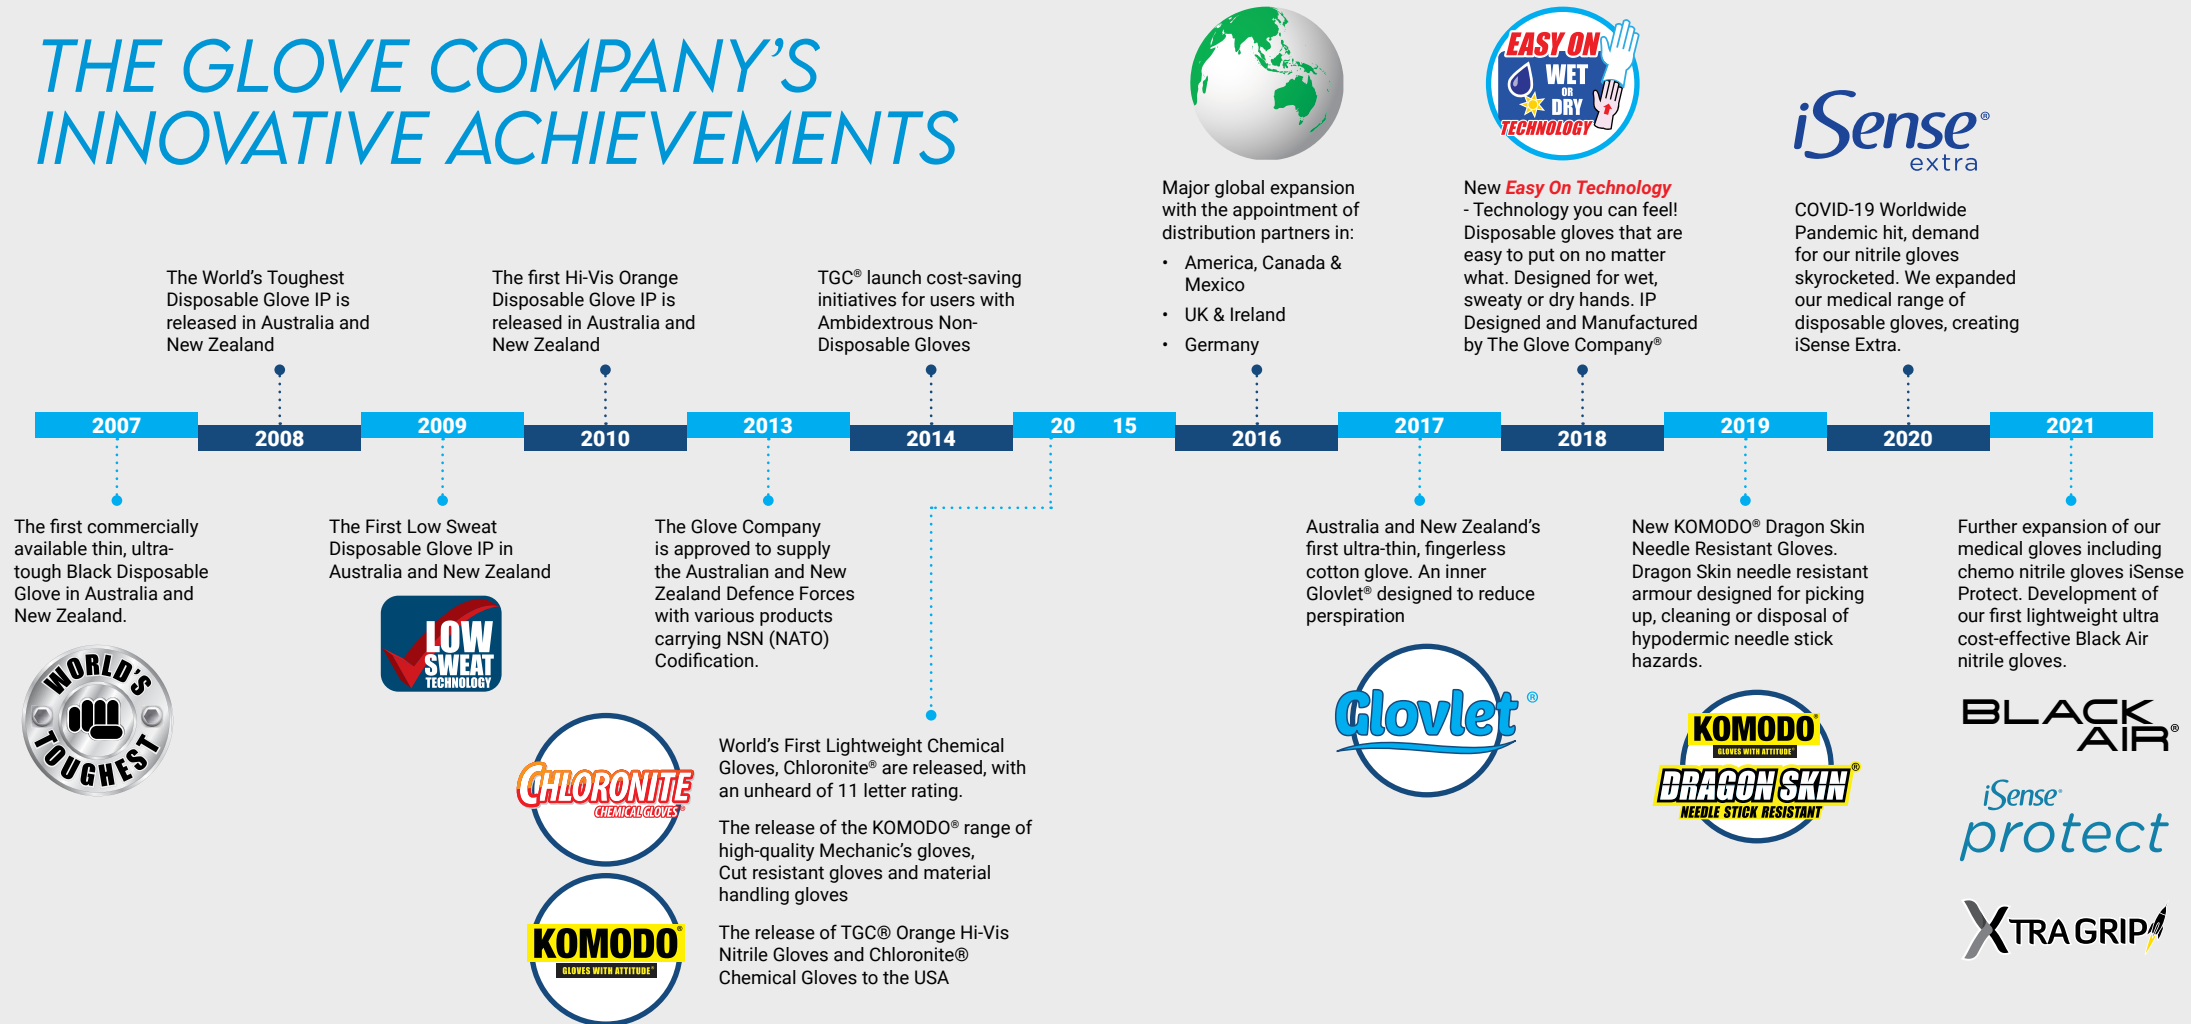

The Glove Company® is continuing to develop a number of revolutionary solutions for multiple industries. We welcome all enquiries and requests for new or enhanced products from both corporate and retail clients.

Engineered Protection & Comfort. International accredited quality control manufacturing. AS/NZS Standards accreditation. EN Standards accreditation.

If you have any questions or queries do not hesitate to contact us.

THE GLOVE COMPANY'S INNOVATIVE ACHIEVEMENTS

Learn About.. Our Brands

Our namesake brand. The Original. The Best. The World's Toughest. The glove that started it all.

TGC®'s little brother. Industrial Trade Quality. Cost-effective.

Lightweight. Comfortable. Ultra cost-effective black nitrile.

Innovative. Quality. General-Purpose. Blue Nitrile.

Finest quality medical range of Nitrile Gloves.

Tough. Reliable. Quality. Material handling hand protection.

Sweat Reducing. Comfort. Hygienic. Potentially Dermatitis Reducing.

Incredibly Strong. Xtra Grip surface designed for dealing with oil and grease.

Ecofriendly. Biodegradable in landfill.

Strong and thick. Extreme Grip. Extended 270mm Long Cuff.

Fully-Lined for Ultra Comfort. Mega Grip. Extended 300mm Long Cuff.

Learn About.. Glove Standards

Chemical Resistance

Request Product Chemical Resistance Guide

The information 'i' shown in this pictogram indicates that the gloves resistance to chemicals will be shown on a separate reference sheet.

Low Resistance Waterproof

For gloves that cannot resist some chemicals for more than the required 30 minutes.

EN 374-2 MicroOrganisms

The 'Micro-organism' pictogram is to show when the glove conforms to at least a performance of less than 60 minutes (level 2) for the Penetration test.

Tested EN Chemicals

There are more than 15,000 chemicals commonly used commercially and industrially worldwide, this is why EN 374 approved and tested chemicals are so important. These 12 chemicals are carefully tested and selected to give the best overview of a glove's chemical performance.

A glove must not have a permeation breakthrough when immersed for a minimum of 30 minutes in one of the 12 chemicals (Fig 1) to be awarded the adjacent letter.

Chemicals	
A Methanol	G Diethylamine
B Acetone	H Tetrahydrofurane
C Acetonitrile	I Ethyl Acetate
D Dichloromethane	J n-Heptane
E Carbon Disulfide	K Sodium Hydroxide 40%
F Toluene	L Sulphuric Acid 96%

(Fig 1)

Heat Resistance

For level 3 of conductive heat the gloves inside material must manage 350°C heat for 15 seconds before the material exceeds 35°C from ambient temperature of 25°C.

Food Safety

What is HACCP?

A developed system designed to identify and minimise points of failure. HACCP is also used as an international food safety certification for a variety of successful products. If a product shows the HACCP logo it is of the best food safety standards.

VIC LAB

The Importance of Independent Testing

Testing: Is crucial in the safety industry

Always ensure that the gloves you decide on are independently third-party tested and certified.

Unless the results have come from an independent thirty party accredited test facility, then you are just taking someone's word for it.

It is also advised that the facility is based in a country where standard enforcement is strong.

The Glove Company gloves have been independently third-party **tested in Australia** under AS/NZS 21.3:2005 / EN388 in conjunction with Vic Labs who have in turn been independently tested and accredited that their test results are of the highest standard.

Mechanical Risks

Abrasion

This 1-4 digit represents how many cycles of a coarse surface the glove can handle until failure.

Cut

Grade 3 gloves are commonly used for handling rough edges up to 5kg. Grade 5 gloves are commonly used for broken glass or knives.

Tear

The higher this 1-4 digit the more torque (Nm) a glove can take in a tearing motion.

Puncture

1 = 20Nm until break
2 = 60Nm until break
3 = 100Nm until break
4 = 150Nm until break

Test

Performance Level

	1	2	3	4	5
Abrasion Resistance Cycles	100	500	2000	8000	–
Blade Cut Resistance	1.2	2.5	5	10	20
Tear Resistance (newtons)	10	25	50	75	–
Puncture Resistance (newtons)	20	60	100	150	–

TGC® NITRILE GLOVES BLACK

The glove that changed an industry!

The first ultra-tough, black disposable glove in Australia and NZ.

Our unique formulation set the standard in Nitrile glove performance and is still the strongest, toughest and most chemically resistant glove material on the market.

TGC® Black Nitrile Disposable Gloves are enhanced with the latest low sweat technology.

TGC® Black Nitrile Disposable Gloves are the only black disposable glove certified for NATO and NSN codification for use by the defence force and aviation industry.

DRAGON SKIN®
NEEDLE STICK RESISTANT

Dragon Skin® Branded Armour Plating

KOMODO® Dragon Skin® Needle Stick Resistant Gloves are designed for picking up, cleaning or disposal of hypodermic needle stick hazards. The gloves help prevent needle stick injury, as the last form of hazard control.

Offering more dexterity than any other needle stick resistant glove, the KOMODO® Dragon Skin® Needle Stick Resistant gloves, are less bulky and more flexible than traditional Needle Stick Resistant Gloves. More dexterity allows users better hand control when picking up hypodermic needles, rapidly decreasing the risk of needle stick puncture.

This product is cut & puncture resistant but not cut & puncture proof. Do not use with moving or serrated blades or tools. Always conduct a safe test to make sure it is suited for your use. This product is only available in Australia and New Zealand. Not to be sold, used, imported or distributed in any country outside of Australia or New Zealand.

BENEFITS

- 3 interconnected layers of Dragon Skin®
- Engineered Armour Plating
- Certified and independently tested in Australia
- Needle Stick Resistant Certification ASTM
- F2878-10 for protection against 21 Gauge Hypodermic Needle to 6Nm of Force
- Natural rubber and wrinkle grip
- Breathable and flexible back of hand
- European standards rating for mechanical hazards

CHLORONITE[®]

CHEMICAL GLOVES[®]

Lightweight advanced co-polymer technology

Chloronite[®] is the new lightweight chemical glove that is exceeding industry standards. Our Chloronite[®] chemical resistant gloves have been awarded a rare 11 letter rating under the EN 374, AS/NZS 2161.10.1 2005 standard. Unheard of!

Say goodbye to big chunky chemical gloves, now you can use an agile lightweight glove with high levels of dexterity for a vast range of hazardous chemicals.

This is the result of exhaustive research and development by The Glove Company[®] which has produced a world leading solution for chemical protection in hand safety.

When things get heated BlueHeat[®] keeps you cool

BlueHeat[®] is your best way to 'beat the heat'. This lightweight heat tested glove is the everyday solution to temperature affected items up to 150°C*.

The glove is made from comfortable, cool cotton and void filled coated dipped latex to produce a super wrinkle finish that minimises the contact surface area of the glove on high temperature items. Tested to EN 407 class 2 for heat resistance and level 3 for contact heat.

* Not suitable for welding or any open flame.
