- Efficiency focused procedures

GLOBAL DEFENCE SPECIALIST

- Registered as an official supplier of The Australian Government Department of Defence.
- Supplies Defence NATO codified NSN numbered gloves

THE GLOVE COMPANY'S INNOVATIVE ACHIEVEMENTS

2007
The first commercially available thin, ultra-tough Black Disposable Glove in Australia and New Zealand.

2008
The World's Toughest Disposable Glove IP is released in Australia and New Zealand.

2009
The First Low Sweat Disposable Glove IP in Australia and New Zealand.

2010
The first Hi-Vis Orange Disposable Glove IP is released in Australia and New Zealand.

2013
The Glove Company is approved to supply the Australian and New Zealand Defence Forces with various products carrying NSN (NATO) Codification.

2014
TGC® launch cost-saving initiatives for users with Ambidextrous Non-Disposable Gloves.

2015
World's First Lightweight Chemical Gloves, Chloronite® are released, with an unheard of 11 letter rating.

2016
Major global expansion with the appointment of distribution partners in:

- America, Canada & Mexico
- UK & Ireland
- Germany

2017
Australia and New Zealand's first ultra-thin, fingerless cotton glove. An inner Glovlet® designed to reduce perspiration.

2018
New Easy On Technology - Technology you can feel! Disposable gloves that are easy to put on no matter what. Designed for wet, sweaty or dry hands. IP Designed and Manufactured by The Glove Company®.

2019
New KOMODO® Dragon Skin Needle Resistant Gloves. Dragon Skin needle resistant armour designed for picking up, cleaning or disposal of hypodermic needle stick hazards.

2021
Further expansion of our Rocket range with grip. Development of our first lightweight ultra cost-effective BLACK AIR® nitrile gloves.

2022
We introduced our new sustainable technology BioGlove™ & launched a new chemical resistant dual-layered glove, X-Guard.

2023/24
Introduced Voltage Glove for working on EV/Hybrid vehicles.

Sweat Reducing. Comfort. Hygienic. Potentially Dermatitis Reducing.

Ecofriendly. Biodegradable in landfill.

Strong and thick. Extreme Grip. Extended 290mm Long Cuff.

Fully-Lined for Ultra Comfort. Mega Grip. Extended 280mm Long Cuff.

Learn About.. Glove Standards

The most common standard disposable gloves should feature is EN374. This framework classifies how well a glove will protect you against chemicals, micro-organisms, and viruses.

There are many parts to EN374. The most important to look out for is Part 1 and Part 5.

**Glove standards provide a guide only. It is recommended to check that the gloves are suitable for the intended use. For specialised applications contact your trusted glove provider.*

EN374-1: Chemical Resistance

EN374-1 tests a glove's chemical permeability against 18 different chemicals. If the glove is proven effective against a chemical, it is assigned the appropriate letter relating to that chemical.

There are over 15,000 chemicals used commercially and industrially worldwide. EN374 approved chemicals are carefully tested and selected to provide the best overview of a glove's chemical performance.

Chemicals and their related letter

| | | |
|---------------------------|-------------------------------|---------------------------------|
| A Methanol | G Diethylamine | M Nitric acid 65% |
| B Acetone | H Tetrahydrofurane | N Acetic acid 99% |
| C Acetonitrile | I Ethyl Acetate | O Ammonium hydroxide 25% |
| D Dichloromethane | J n-Heptane | P Hydrogen peroxide 30% |
| E Carbon Disulfide | K Sodium Hydroxide 40% | S Hydrofluoric acid 40% |
| F Toluene | L Sulphuric Acid 96% | T Formaldehyde 37% |

The time it takes a chemical to permeate a glove is assessed and the breakthrough time is recorded as a 1-6 performance level.

The glove's performance level for each chemical is not listed on the EN374-1 symbol. If you would like to learn your glove performance levels, contact The Glove Company or your glove distributor.

Breakthrough Time BTT (mins) Performance Level

| | |
|------|---------|
| >10 | Level 1 |
| >30 | Level 2 |
| >60 | Level 3 |
| >120 | Level 4 |
| >240 | Level 5 |
| >480 | Level 6 |

Gloves are then classified as Type A, B, or C, depending on how many chemicals they withstand during testing.

TYPE A

Withstands at least six different test chemicals for at least 30 minutes each.

EN ISO 374-1
Type A JKLOPT

TYPE B

Withstands at least three different test chemicals for at least 30 minutes each.

EN ISO 374-1
Type B KPT

TYPE C

Withstands at least one test chemical for at least 10 minutes.

EN ISO 374-1

EN374-5: Resistance to Virus, Bacteria and Fungi

EN374-5 tests a glove's resistance to viruses, bacteria, and fungi. It is a simple pass or fail test. Micro-organism resistance was formally tested under EN374-2. Changes implemented in 2016 now classify this test as a part of EN374-5.

The below symbol will display if the gloves protect against

Bacteria, Fungi and Virus

ISO 374-5:2016
Virus

Note: The word 'virus' written under symbol

Bacteria and Fungi

ISO 374-5:2016

Note: The word 'virus' not written under symbol

EN407: Heat Resistance

Under updated standards implemented in 2020, there are now two symbols relating to gloves that offer protection against thermal risks.

To test flame resistance (flammability), the glove is mounted above a flame. Once the ignition source is removed the length of time in which the glove continues to flame is recorded, this is the 'After Flame Time'. To achieve a level one rating for flammability, the glove must have an after flame time of 15 seconds or less.

If the glove is not tested against flammability or does not achieve at least a level one, the heat without flame symbol (right) must be displayed and the letter X will replace the 1-4 digit for flammability (shown below).

The below symbol will display if the gloves protect against

Heat and Flame

Heat without Flame

Heat Resistance symbol

Resistance to Contact Heat*

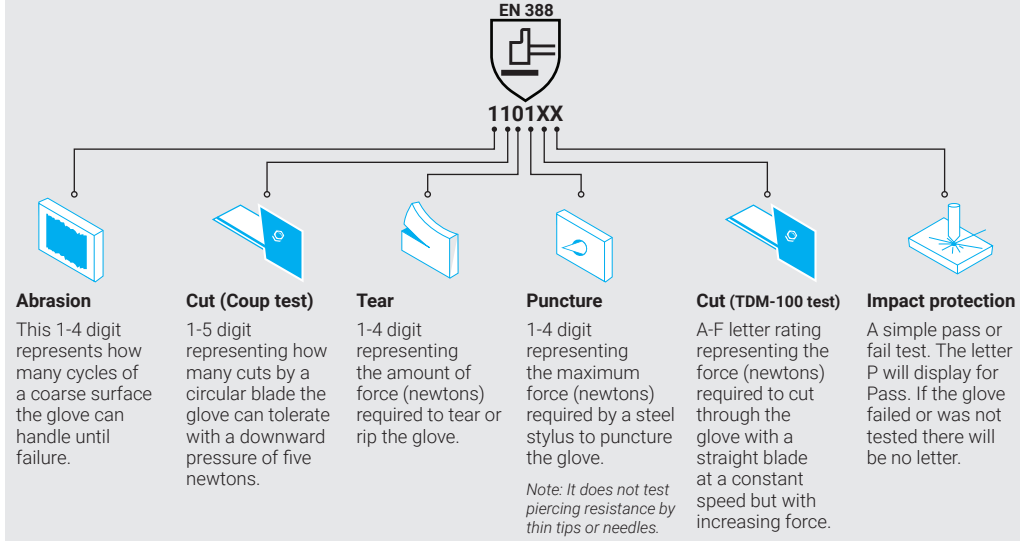

| Performance Level | Contact Temperature | Threshold Time (seconds) |
|-------------------|---------------------|--------------------------|
| 1 | 100°C | ≥15 |
| 2 | 250°C | ≥15 |
| 3 | 350°C | ≥15 |
| 4 | 500°C | ≥15 |

* Contact Heat Resistance

A 1-4 digit representing the maximum contact temperature the glove can endure for at least 15 seconds without showing signs of melting or holing. To achieve higher than a level 2 for contact heat, the glove must also achieve at least a level 3 for resistance to flammability.

EN388: Mechanical Risks

Mechanical Risks

| Test | Performance Level | | | | | |
|---|-------------------|-----|------|------|-----|-----|
| | 1 | 2 | 3 | 4 | 5 | |
| Abrasion Resistance Cycles | 100 | 500 | 2000 | 8000 | - | |
| Blade Cut Resistance (Coupe Test) | 1.2 | 2.5 | 5 | 10 | 20 | |
| Tear resistance (newtons) | 10 | 25 | 50 | 75 | - | |
| Puncture Resistance (newtons) | 20 | 60 | 100 | 150 | - | |
| | A | B | C | D | E | F |
| Cut Resistance (TDM-100 test) (newtons) | 2N | 5N | 10N | 15N | 22N | 30N |

0 indicates the glove did not meet the minimum performance level for that individual mechanical risk test.
X indicates the glove has not been tested or the test method is not suitable for the glove's design or purpose.

Food safety - What is HACCP?

A developed system designed to identify and minimise points of failure. HACCP is also used as an international food safety certification for a variety of successful products. If a product shows the HACCP logo it is of the best food safety standards.

The importance of independent testing - in the safety industry it is crucial

Hand and wrist injuries are one of the most common work-related injuries, so hand protection that works with you is a must!

The Glove Company cares about *quality* and *trust*, we ensure all our gloves are independently third-party tested, accredited, and certified to international standards.

Unless the results come from an independent third-party accredited test facility, you are only taking someone's word for it. All of the Glove Company's products are compliant to AS – AS/NZA – ISO – BS – EN – ASTM – NFPA, and other international standards.

TGC® BLACK NITRILE GLOVES

KOMODO
GLOVES WITH ATTITUDE®
DRAGON SKIN®
NEEDLE STICK RESISTANT

DRAGON SKIN® BRANDED ARMOUR PLATING

KOMODO® Dragon Skin® Needle Stick Resistant Gloves are designed for picking up, cleaning or disposal of hypodermic needle stick hazards. The gloves help prevent needle stick injury, as the last form of hazard control.

Offering more dexterity than any other needle stick resistant glove, the KOMODO® Dragon Skin® Needle Stick Resistant gloves, are less bulky and more flexible than traditional Needle Stick Resistant Gloves.

More dexterity allows users better hand control when picking up hypodermic needles, rapidly decreasing the risk of needle stick puncture.

- ✓ Three interconnected layers of Dragon Skin® – Engineered Armour Plating
- ✓ Certified and independently tested in Australia
- ✓ Needle Stick Resistant Certification ASTM – F2878-10 for protection against 21 Gauge Hypodermic Needle to 6Nm of Force
- ✓ Natural rubber and wrinkle grip
- ✓ Breathable and flexible back of hand
- ✓ European standards rating for mechanical hazards – EN388:2016 4544BX
- ✓ Needle stick resistance is on palm only

CHLORONITE[®]

CHEMICAL GLOVES[®]

LIGHTWEIGHT ADVANCED CO-POLYMER TECHNOLOGY

Chloronite[®] is a lightweight chemical glove that exceeds industry standards. The snug fit allows for an extremely dexterous performance so you can say goodbye to big chunky chemical gloves!

Withstands a vast range of hazardous chemicals, boasting a rare 9-letter rating under the EN374 standard. Trusted by the front lines – Chloronite[®] Chemical Gloves are certified for NATO and NSN codification for use by the defence force and aviation industry.

The proven twin material blend, co-polymer, is the result of exhaustive research and development by The Glove Company[®] to produce a world leading chemical protection solution.

Ideal for use with damaging solvents, volatile fuels, oils, corrosive acids, burning alkali and hazardous chemicals.

BLUE HEAT[®]

WHEN THINGS GET HEATED BLUEHEAT[®] KEEPS YOU COOL

Your best way to beat the heat, BlueHeat[®] is the everyday solution to temperature affected items up to 150°C*.

Manufactured with comfortable cooling cotton material and coated with void-filling latex that produces a super wrinkle finish. The raised wrinkle texture minimises the surface area that contacts high temperature items, ensuring you can handle heated situations confidently.

The rugged surface of grooves and ridges produces unbeatable grip and control in wet, dry, or even oily conditions, reducing the risk of temperature affected items dropping or slipping.

* Not suitable for welding or any open flame.

BENEFITS

- Extended splash protection 300mm Long Cuffs
- Empowers unmatched dexterity thanks to the agile twin material blend
- Accelerator-free design allows extended comfortable wear
- Textured fingers enhance grip in wet, slippery, and dry environments
- Vibrant red colour boosts visibility in low and dark light conditions

Glovlet®

THE ULTIMATE SWEAT MANAGEMENT SOLUTION

Designed for people whose jobs require them to use gloves every day.

Glovlets® are fingerless, reusable, natural cotton liner gloves. Featuring moisture wicking technology, Glovlets help keep your hands feeling fresh, natural, and comfortable all day every day.

Wear Glovlets® under your daily protective gloves for heightened comfort, warmth, sweat management or help preventing dermatitis. Glovlets® also act as an extra layer of hygiene prevention at public gyms and sports recreation centres.

Any frequent glove user knows damp donning and re-donning is a problem our Glovlets® were designed to solve.

BENEFITS

- Natural cotton nylon blend for the ultimate sweat management solution
- Provides an easy and affordable solution to dermatitis
- Noticeably soft material creates a highly breathable barrier between your hand and outer glove
- Fully washable and reusable

APPLICATIONS

- Great for Gyms, Sports and Boxing
- Factory & Process workers
- Mechanics
- Food preparation & Manufacturing industries
- Electronics & Assembly industries
